

Berechnen Sie nachvollziehbar, mit aufgeschriebenen Ansätzen und Skizzen die gefragten Elemente

18) Walmdach nicht rechtwinkelig, Dachneigung 22° und 36° .
 Ges.: First-, Grat- und Traufenlänge; Dachflächen.

Normalprofile: $g_H = \underline{\underline{6,20\text{m}}}$

$h_F = 6,20 \cdot \tan 22^\circ = \underline{\underline{2,505\text{m}}}$

$g_W = \frac{2,505}{\tan 36^\circ} = \underline{\underline{3,448\text{m}}}$

Hausschräge:

$\alpha_{sch} = \tan^{-1} \frac{1,80}{12,40} = \underline{\underline{8,259^\circ}}$

$l_{sch} = \frac{12,40}{\cos 8,259^\circ} = \underline{\underline{12,530\text{m}}}$

Gratrundwinkel:

$\gamma_{0H} = \tan^{-1} \frac{6,20}{3,448} = \underline{\underline{60,922^\circ}}$

$\gamma_{1H} = \tan^{-1} \frac{6,20}{\frac{3,448}{\cos 8,259^\circ} + \frac{1,80}{2}} = \underline{\underline{54,736^\circ}}$

$\gamma_{2H} = \tan^{-1} \frac{6,20}{\frac{3,448}{\cos 8,259^\circ} - \frac{1,80}{2}} = \underline{\underline{67,376^\circ}}$

Gratprofile:

$g_{G0} = \frac{6,20}{\sin 60,922^\circ} = 7,094\text{m}$

$g_{G1} = \frac{6,20}{\sin 54,736^\circ} = 7,593\text{m}$ $g_{G2} = \frac{6,20}{\sin 67,376^\circ} = 6,717\text{m}$

$l_{G0} = \sqrt{2,505^2 + 7,094^2} = \underline{\underline{7,523\text{m}}}$

$l_{G1} = \sqrt{2,505^2 + 7,593^2} = \underline{\underline{7,996\text{m}}}$

$l_{G2} = \sqrt{2,505^2 + 6,717^2} = \underline{\underline{7,169\text{m}}}$

First- und Traufenlänge:

$l_F = 15,00 - 3,448 - \frac{3,448}{\cos 8,259^\circ} - \frac{1,80}{2} = \underline{\underline{7,168\text{m}}}$

$l_{TF} = 15,00 + 12,40 + 13,20 + 12,53 = \underline{\underline{53,13\text{m}}}$

Dachfläche:

$A_{Sch,H} = \frac{(15,00 + 13,20 + 2 \cdot 7,168) / 2}{\cos 22^\circ} \cdot 6,20 = 142,22\text{m}^2$

$A_{Sch,W} = \frac{6,20 \cdot 3,448}{\cos 36^\circ} + \frac{12,53 \cdot 3,448}{2 \cdot \cos 36^\circ} = \underline{\underline{53,12\text{m}^2}}$
 $\underline{\underline{195,34\text{m}^2}}$
